

## LabVIEW Update

- LV 8.5 Professional is installed on the operations (108) subnet. LV 7.0 is still on the development (104) subnet.
- We're still having problems getting the NI488/GPIB software working on all nodes. It only works on lin59 and lin84.
- Use LV Project to build applications
- ClearCase Not Supported by NI – but adapting NI's “perforce” interface looks promising.
- Guide users to 104 subnet if they have problems and need LV 7.0
